

# DI-71x and DI-148/158 Series USB Driver Installation for Windows 7

### On this Page

Symptoms Cause Resolution Manually Install the drivers Applies To

### Symptoms

DI-71x/148/158 series USB drivers do not automatically install under Windows 7.

### Cause

Windows 7 will not automatically install "unsigned" drivers.

### Resolution

To resolve this issue:

#### Manually Install the drivers

- 1. Connect your DI-71x /148/158 series device to an available USB port.
- 2. Open the Windows Device Manager, right click on the DATAQ DI-71x /148/158 under "Other Devices" and choose Update Driver Software.

- 3. Next, choose "Browse my computer for driver software" and select the drive that contains the WinDaq Resource CD (you'll need to give Windows permission to install the driver)
- 4. Once the first driver is installed, leave the Windows Device Manager open and perform the same procedure for the USB Serial Port (also located under 'Other Devices).
